

### Ensuring a Bright Future

1Vision is an environmentally responsible company whose efforts and initiatives lead the industry.

Recognized by the **Colorado Environmental Leadership Program**

and a Green Member of PIA Certified Green Printer, we are committed to meeting and exceeding environmental regulations and working continuously to improve the effectiveness of our sustainable management programs.

#### Engineered with the “do no harm” philosophy

Our Komori GL 840 H-UV (H standing for high-efficiency) is one of the greenest offset presses on the market, designed with **no VOC emissions** and **ozone-free H-UV process** for cleaner air.

#### Designed to reduce the environmental impact

Not only does our press mirror 1Vision’s green initiatives and our commitment as an environmentally responsible printer - it is a mutually beneficial balance that is friendly to both the production environment and the global environment.

- ✓ **Prevention of Pollutants**
- ✓ **Conservation of Energy**
- ✓ **Less Paper Waste**

### ENVIRONMENTAL INITIATIVES

#### FSC Certified

We are proud to be FSC certified by the Rainforest Alliance. The Forest Stewardship Council™ (FSC Certified) is a non-profit organization devoted to encouraging the responsible management of the world’s forests.

What this means to you as a client is that we can assist you in choosing the best paper products and printing methods for your environmentally-friendly projects. Your account manager or customer service representative can provide you with more details about our FSC-certified stocks and products.

#### Green Paper Stock

We offer a wide selection of recycled papers that can support your environmental initiatives. Recycled paper doesn’t have to look recycled, and most on the market today don’t. Many of our premium, specialty and economy papers are made with high percentages of recycled fibers and come in a variety of sizes, and weights.

#### No VOC Emissions and Ozone-Free H-UV

To reduce our impact on the environment we have consciously chosen to print using offset presses that produce no VOC emissions and ozone-free H-UV. When you choose to print with us you know that you are helping to; improve air quality, improve our employee’s health and safety, reduce chemical use and recycle ink.

#### Whole-Facility Recycling Program

We recycle virtually all of our post-production waste and have programs in place to recycle not only the waste paper that we print on, but also the packaging material it ships in. Our recycled programs include recycling plastic drums and containers, aluminum press plates and other nonferrous metals, steel banding material, pallets and other wood products, press blankets, inks, CRT monitors and computer equipment.
